

Bio:

WEI DAN, female, Master of China University of Petroleum, senior engineer, chief logging officer of Exploration and Development Department of CNOOC Research Institute, member of the Logging Professional Committee of the Chinese Petroleum Society, and member of the Technical Committee of the 65-66th SPWLA Forum. Since joining CNOOC, I have been engaged in well logging data processing and interpretation, as well as rock physics research. I have participated in the logging evaluation of complex oil and gas reservoirs such as low porosity/permeability/resistance reservoirs, thin interbedded sandstone and mudstone, carbonate rocks, tight sandstones, and buried hills. I have provided logging technology support for overseas oil and gas field mergers and acquisitions, new drilling and tracking, reserve assessment of large-scale unconventional gas field Linxing gas field on land, evaluation of offshore risk exploration targets, and oil and gas field development and production.
